The following is an examiner's statement of reasons for allowance:

It is noted that independent claim 1 teaches a method of making a transparent article by forming a protective carbon coating on an optical coating on a substrate followed by a heating and reacting step. After those steps, the protective coating is subsequently removed. In other words, the claimed method makes a transparent article by merely providing an optical coating on a substrate, depositing a protective coating, performing a few inconsequential steps to the protective coating, and removing the protective coating. Those steps specifically include reacting the protective layer to form a gas which appears to have no effect on the optical coating or the substrate.

In summary, the process requires simply providing an optical coating on a substrate, performing a few steps which have no bearing on the optical coating and substrate, and ending with the same optical coating on a substrate. Since the prior art fails to teach those steps, claims 1-21 are being allowed.

With respect to claims 22-34, the applicant's arguments provided on pp.11-12 of the Response dated 11/7/03 are deemed persuasive.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
